Thanks so much for your purchase of the Ultimate3DHeaven  
Ultra-Clear 3D glasses for Sharp 3D Televisions!

# Easy Quick Start Guide

**Step 1: Charge your 3D Glasses** *Initially connect the USB Charging cable to PC, Television or other USB device and then plug the other end of the cable into the “Charging Interface” of the 3D Glasses until fully charged. You will notice an illuminated red light when the 3D glasses are charging (you will know the glasses are fully charged when this light turns off). Unplug USB Charging cable and then the glasses are ready for use. It is recommended to use and charge your 3D glasses at least once every other month to ensure a long product life.*

**Step 2: Put your TV in the 3D Mode (you will see a slightly doubled picture on the screen).** *Put your TV in 3D mode so that its IR emitter turns on (you will see a slight doubling around all 3D objects that will turn into one 3D object once the glasses are turned on). Typically to do this you would need to have a 3D Blu-ray player (or similar device) playing a 3D Blu-ray or you can be doing 2D to 3D Conversion with many televisions. Then you would turn on your IR/RF/Bluetooth transmitter via the televisions on screen menu options if it does not turn on automatically (most televisions are already putting off this signal if you see a doubling on the screen).*

**Step 3: Hold the glasses about 12 inches (1 foot) from the bottom middle of the television. Hold down the activation button for 10 seconds, the glasses activation button will then flash rapidly while it synchs with the Bluetooth/RF/IR signal (it may flash for up to one minute while it is synching with the television & you can release the button while the flashing continues) \*\*\*Please note you may have to repeat the first step of holding down the activation button for 10 seconds twice in a row for the glasses activation button to flash rapidly over and over again while it is synching with the glasses. In the end the glasses will synch and the flashing led light turns off (the glasses are then slightly darker and the double image on the screen becomes one).**

## PLEASE NOTE:

*These 3D Glasses were designed to work with all Sharp 3D Televisions that use active RF/Bluetooth/IR 3D shutter glasses.*

**After the 3D Glasses have been initially programmed:**

**To Power On** Press the working button (and let go right away, just a short press).

**To Power Off** Under the operating mode hold down the same button and the indicator light will flash 3 times and then turn off

Under normal operating conditions, electronic 3D glasses are perfectly safe to use for any duration you would normally view 3D images on your screen. However, some people may experience discomfort that could signal problems with the hardware, software and/or physical problem with your visual system. Discontinue use of the electronic 3D glasses and consult a physician if you experience any of the following: headache, eyestrain, blurry vision, double vision, involuntary movements, eye or muscle twitching, confusion, loss of awareness of your surroundings, dizziness or disorientation. To minimize the potential for any of the above symptoms to arise, adjust the ambient lights darker.

**EPILEPSY WARNING: IF YOU OR ANY MEMBER OF YOUR FAMILY HAS A HISTORY OF EPILEPSY OR OTHER SEIZURE DISORDER, CONSULT A PHYSICIAN BEFORE USING THIS OR ANY OTHER 3D PRODUCTS.**
